

THE DC GREEN SYSTEM

DUSTCONTROL specialises in stationary and mobile high vacuum extraction systems, air cleaners and suction casings for cleaning and source extraction. Dustcontrol aids a cleaner and more efficient production environment. At Maintec the company showcased a new concept, the DC Green System. Used with vacuum turbo-pumps, it offers energy savings with existing or new Dustcontrol machines of between 40 to 90%. The system controls the RPM in relation to the number of users and automatically switches the vacuum producer to a saving mode when it is not in use. This smart system reduces energy consumption and therefore contributes to financial savings.

SURFACE CLEANING

The latest launch from TORK is a surface cleaning wet wipe that is also kind to hands. Tork surface cleaning wet wipes are effective at cleaning away oils and grease and have been dermatologically tested to be safe to use on the hands. Tork surface cleaning wet wipes are housed in the Tork Handy Bucket which is tightly sealed with a silicone lid to keep the wipes moist and free from contamination. Each bucket contains 58 sheets and the purpose-designed nozzle allows only one wipe to be taken out a time to reduce over-consumption.

1 MEGAWATT CONDENSING BOILERS

HOVAL has now extended the capacity of its high-efficiency UltraGas condensing gas boiler range to 1MW. Single UltraGas units now offer capacities from 50kW to 1000kW, while twin UltraGas units offer outputs from 250kW to 2000kW – complete with common flue and optional pipework/header kits.

The 500kW and 1000kW models are also available in 8 bar versions. Featuring Hoval's Ultra Clean combustion system, the boilers use a modulating pre-mix down firing burner with up to 6:1 turndown (12:1 on twin units) and a stainless steel combustion chamber with a single pass aluFer tube heat exchanger. The aluFer tubes are also made of stainless steel with an aluminium alloy finned internal surface to provide a high surface area for heat exchange.

TRAFFIC MARKING SYSTEM

When a metal packaging manufacturer decided to improve safety on its factory floor by applying a new traffic marking system – RapidShield UV-curable floor coating technology was the chosen solution. Once applied, RAPIDSHIELD is cured instantly by a portable UV-light unit which turns the coating into a solid film, at the same time creating a strong bond to the substrate. This fast cure means there was minimal disruption to production as, within minutes, the floor could be used again. The floor coating is non-flammable, low odour, contains no solvents or isocyanates and complies with all the latest VOC and HAP regulations. It is designed for use on any new or existing concrete floor. Contact savilled@quakerchem.com

TORK REPORT AIMS TO INCREASE HYGIENE KNOWLEDGE

A publication designed to share industry knowledge on vital topics such as hygiene and efficiency has just been launched by TORK manufacturer SCA TISSUE EUROPE. The Tork Report will be published three times a year and contain academic and general articles written by professionals both inside and outside the cleaning industry. "Topics such as hygiene and the environment are in the forefront of people's minds at the moment," said SCA Tissue Europe marketing communications coordinator Jamie Wright. "At the same time, issues such as swine flu are increasing people's awareness of the importance of hygiene in the workplace". Six issues of the Tork Report are being planned initially to cover subjects such as the environment, efficiency, productivity and social change as well as hygiene. Visit www.tork.co.uk/torkreport/subscribe.

PROTECTION FOR HOSE COUPLINGS

Dunlop Oil & Marine Ltd, based at Grimsby is a world leader in the design, manufacture and supply of hoses for the oil, gas, petrochemical and dredging industries, for both offshore and onshore operations. Its extensive range of hoses are of a rubber composite structure in approximately 40ft maximum lengths, with steel fittings for connections. To meet the advanced protection requirements of some customers, Dunlop Oil & Marine are now internally coating the hose fittings with WINN & COALES Archco Rigidon 403D Vinyl ester flake glass filled coating. The work is carried out by contractors Jack Tighe of Scunthorpe, who shot blast the hose fittings before the spray application.

POWER SOLUTION CONCEPT

SEAWARD has introduced an innovative new concept in 17th edition fixed installation inspection and testing in the shape of the new PowerPlus 1557 Powersolution package. This unique integrated solution eliminates the need for a multi-function test instrument and separate paper or PDA recording devices normally associated with 17th edition test procedures. The new concept works by incorporating an electronic copy of the inspection and test certificate in a combined multi-function electrical tester and data logger. The lightweight PowerPlus 1557 multifunction tester has been designed for maximum portability and ease-of-use. Once all inspection and test data has been collected, the onboard 'Seaward Certificate Assistant' will scan the certificate and warn the user if any fields appear to be incomplete or invalid.

NEW BROCHURE

A new brochure on Aluzinc from SWEDISH STEEL may show component manufacturers how to get rid of a costly stainless steel item, how to get rid of outsourced plated items or how embossing can thin components down and make them more attractive to your clients. The brochure demonstrates examples of deep drawing, spot welding, pressing, roll forming, screen printing and press forming. The ability to apply shallow profiles or embosses or both to Aluzinc is a Swedish Steel speciality, which enhances Aluzinc with stiffness and aesthetics. More than 70 photographs will suggest new ideas and approaches to chassis and component manufacturers. Call Gary Matthews on 01384 74660 or look at aluzinc.co.uk.
